## Project Title: Lego Space Website

Link: [https://en.wikipedia.org/wiki/Lego\\_Space](https://en.wikipedia.org/wiki/Lego_Space)

I'd like to build this site as multiple webpages rather than one single webpage as I want to create an intuitive and well-organized user experience. I want this website to be easily navigable with a clear informational hierarchy structure. To promote this I want to include a navigation bar at the top of the website that will remain present as the user explores the website content so they always have a clear sense of where they are within the larger architecture of the website and how to access other areas of the site.

- **Home Page/Introduction**
  - Navigation Bar
  - Description of what Lego Space is in the Hero
  - Set the tone for the website by establishing a visual aesthetic that reflects that of LEGO.
- **Lego Space History**
  - A timeline overview of various Lego Space sub themes and LEGO sets.
- **Lego Space Build Examples**
  - A page with lots of imagery showing someone constructing one of the LEGO Space theme sets.
- **In-Depth Narrative of a particular Lego Space**
  - Storytelling about one of the LEGO Space theme sets with the character and narrative backstory of the theme.
